

FuelPrime Sp. z o.o., wishes to inform you that our company has fallen victim to a cyberattack that occurred between September 5 and September 22, 2024. Our IT systems were targeted, and some project data was compromised. Among the data affected was work-related personal data processed by FuelPrime including names, email addresses, phone numbers, and job titles of individuals involved in projects, as well as the PESEL numbers of certain collaborators. We are currently conducting a detailed analysis of the extent of the compromised data.

Our IT teams, in collaboration with external cybersecurity experts, promptly took corrective actions. Our systems have been fully restored to operation. A thorough incident analysis has been carried out to prevent similar events in the future. Additionally, we have implemented a range of enhanced data security measures.

First, we identified the source of the attack and successfully blocked further unauthorized access. We also undertook comprehensive actions to elevate the security level of our systems. Treating this incident with the highest priority, we immediately reported it to the President of the Personal Data Protection Office. To ensure the safety of our partners and collaborators, we also notified the Central Bureau for Combating Cybercrime and CERT.

We have determined that the data extracted during the cyberattack has been posted on the darknet. We are currently in the process of identifying the compromised data and are actively notifying the clients whose confidential information may have been disclosed. Please note that the extracted data constitutes our company's trade secrets, and we will take appropriate legal action against any individuals who download or distribute said information. We want to emphasize that the security of our clients and the protection of data are our top priorities.

As a precautionary measure, we are informing affected individuals of potential negative consequences, such as contacts from unknown individuals attempting to fraudulently obtain additional information or engage in identity theft. To ensure data security, we recommend increased vigilance and PESEL number protection.

Due to the ongoing investigation, we cannot provide further details at this time. We appreciate your understanding and trust.
